

Digital Assignment – 1

Project on Designing Self Portfolio Website

PART - 1

Let us create a personal website for each individual using initially HTML and CSS, later we can include JavaScript and Server Programming along with Database.

So as a first step, all of you create a Homepage for your website.

Everyone must create your own Homepage with a unique style (No two students must have same style).

For your reference just check below links. You can add options and formatting as per your requirement.

1. <http://drsandeepks.website2.me/>
2. <https://sites.google.com/view/sandeep-satapathy>

PART – 2

Add two links in the home page, one for login and another one for signup for new users.

In login page there must be two textboxes for giving Username and Password along with Submit and Reset button.

In Signup page collect all information from a new user, such as Name, Email id, Phone no, Set Username and Password etc.

Using Java script do all client side validations such as no form component should be empty, Email id should be valid, password must be minimum 8 characters etc.

PART – 3

Add php code to accept all the signup form details and save them in an associative array. Add php code to accept the login form details and check whether they are matching with a predefined string as “admin” (Username) and “admin@123” (Password). If matching display Login Successful else display Login Unsuccessful.
