

Digital Assignment – 2

Project on Designing Self Portfolio Website

PART - 1

Add following Database related things to the previously created personal website.

- 1. Create a table in MySQL to store all the information collected from signup page, let say table name is “Person_Details”.**
- 2. At least signup 5 person using the signup page and insert all the record in above table.**
- 3. Write another php script that will collect userid and password given in login page and check in the Person_Details table to check the person is already registered and is valid.**

PART – 2

Once the user successfully login into his/her account, a session should start and the session variable must be set to the userid. Also, another cookie must be set which will expire after 30 days and it will be sent to client with information about the user such as userid and time of start.

PART – 3

Once the user will login successfully, there is a web page should be displayed in which there must be an option to send a mail with facility to attach files. Also, there must be a logout button clicking on which user must logout and session must end.
